

ABOUT LIBCAST

Libcast meets specific issues of video communication security for companies or institutions.

Libcast offers a video platform for hosting, encoding and delivering live and on-demand video content on all screens. Based on a scalable publishing platform, Libcast's users customize and control their video publications to make sure they reach the right audience.

Libcast trusts Authôt with its automatic video captioning solution.

Our contact: Joséphine GENTIL
Account Manager at Libcast

CHALLENGES

Looking for partners: In order to improve its service and meet the needs of its customers who understood the challenge of digital accessibility. Libcast wanted to integrate a quality transcription and subtitling solution into its platform.

Achieve technical integration: Authôt's integration is a true added value for the Libcast service: it allows users to caption their videos automatically and easily.

New offerings: Since 2016, Libcast has been offering a live broadcast service. The platform plans to add live transcription and subtitling service in partnership with Authôt.

WITH AUTHÔT

The **meeting** with Authôt happened in **2014** during a **French show** dedicated to Education.

"We have been working with Authôt on common projects for digital accessibility related to videos since 2014."
